

List of Gen eds:

AF AM 201

This class did not really help me or have an impact on my engineering education.

THTRE 106

This class did not really help me or have an impact on my engineering education.

ECON 101

This class helped me understand the importance of the economy and how it works.

Which will be necessary when pricing out products in my future and completing tasks in a costly manner

ECON 102

This class helped me understand the importance of the economy and how it works.

Which will be necessary when pricing out products in my future and completing tasks in a costly manner

INTST 235

This class helped me understand how things might affect different parts of the world in different ways and how different places do things differently.

My current short term goal is to be confident in my self and my skills enough to be able to follow my dreams and pursue a job in the field that I please. Such as finding a job at home working for a company that deals with working with objects that I see everyday such as cars, or vehicles or websites. Vs working on just software stuff. My long term goal is to create my own company that is a mobile application for a fashion company.

Not a lot of my gen eds helped me be able to evaluate engineering solutions beyond the technical aspects. However my economics classes did help me be able to address and understand the economy so that I would be able to make smart decisions on what is financially smart.

Learning about the economic, global and the people aspects of engineering is really important because if you do not consider these factors or have an idea of how these facts can affect your solutions then you could not be creating what you think you will be creating. That is why gen eds can be important for some people.
